## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method for distributing and deriving, classified in class 705, subclass 34.
- II. Claims 13, 14, drawn to a system for bundling and statistic collection, classified in class 705, subclass 30.
- III. Claims 15, 27, drawn to a method of negotiating and distributing, classified in class 705, subclass 26.
- IV. Claim 26, drawn to a system having invitation interface, relationship status and bundle passing, classified in class 333, subclass 24R.
- V. Claims 28-45, 47, drawn to a method of exchanging information and selecting information bundles, classified in class 375, subclass 240.
- VI. Claim 46, drawn to a system using invitations, bundling and filters, classified in class 700, subclass 55.
- VII. Claims 48-58, drawn to a system having distributing information capacity, data storage and security, classified in class 705, subclass 64.

The inventions are distinct, each from the other because:

Inventions I and II-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as method of bulk mailing. See MPEP § 806.05(d).

Inventions II and I,III-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as data mining system. See MPEP § 806.05(d).

Inventions III and I,II,IV-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as an on-line auction. See MPEP § 806.05(d).

Inventions IV and I-III,V-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as an on line dating ssystem. See MPEP § 806.05(d).

Inventions V and I-IV,VI,VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention V has separate utility such as a method of on line communication via e-mail between specialized users. See MPEP § 806.05(d).

Inventions VI and I-V, VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention VI has separate utility such as silo casting on internet e-mail to a specific population using bundled data. See MPEP § 806.05(d).

Inventions VII and I-VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention VII has separate utility such as an on line security system for maintaining the integrity of files stored in data stores. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
